

LinkedEye (LE)

LinkedEye Features Overview

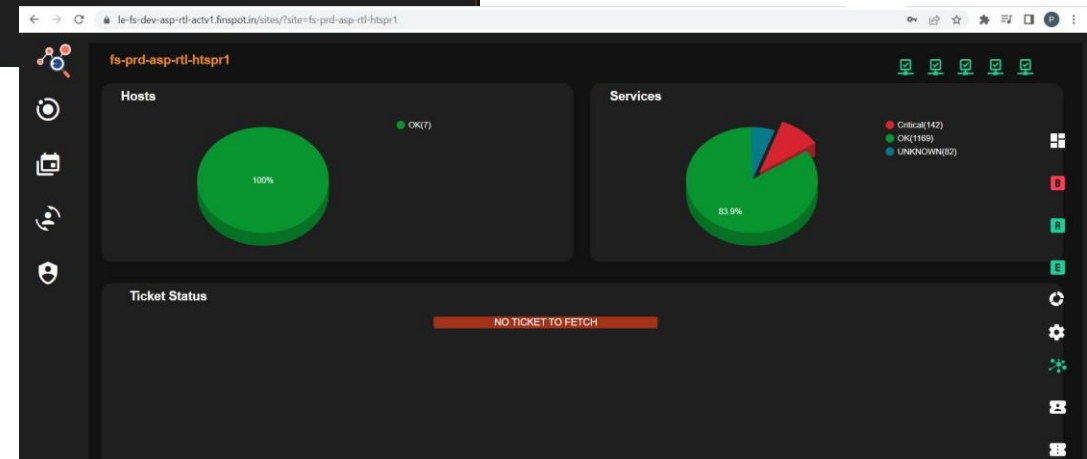

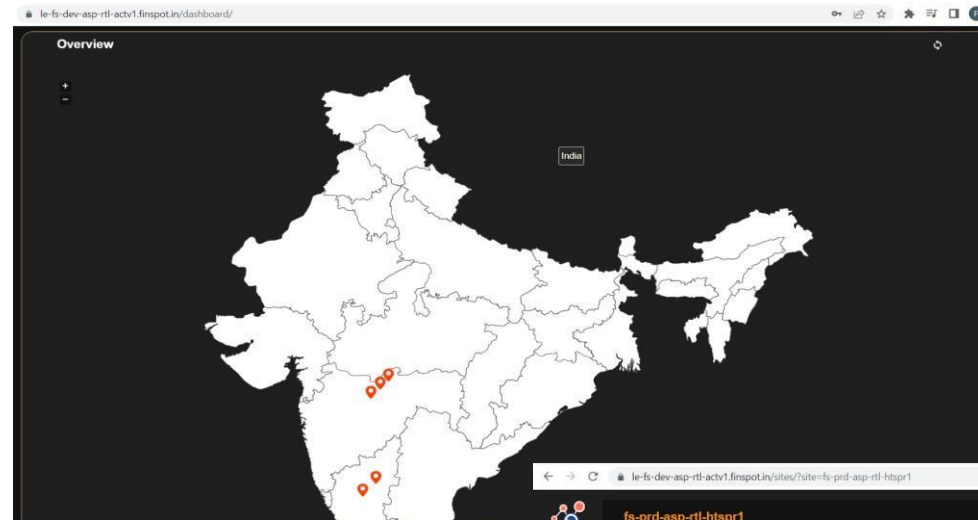

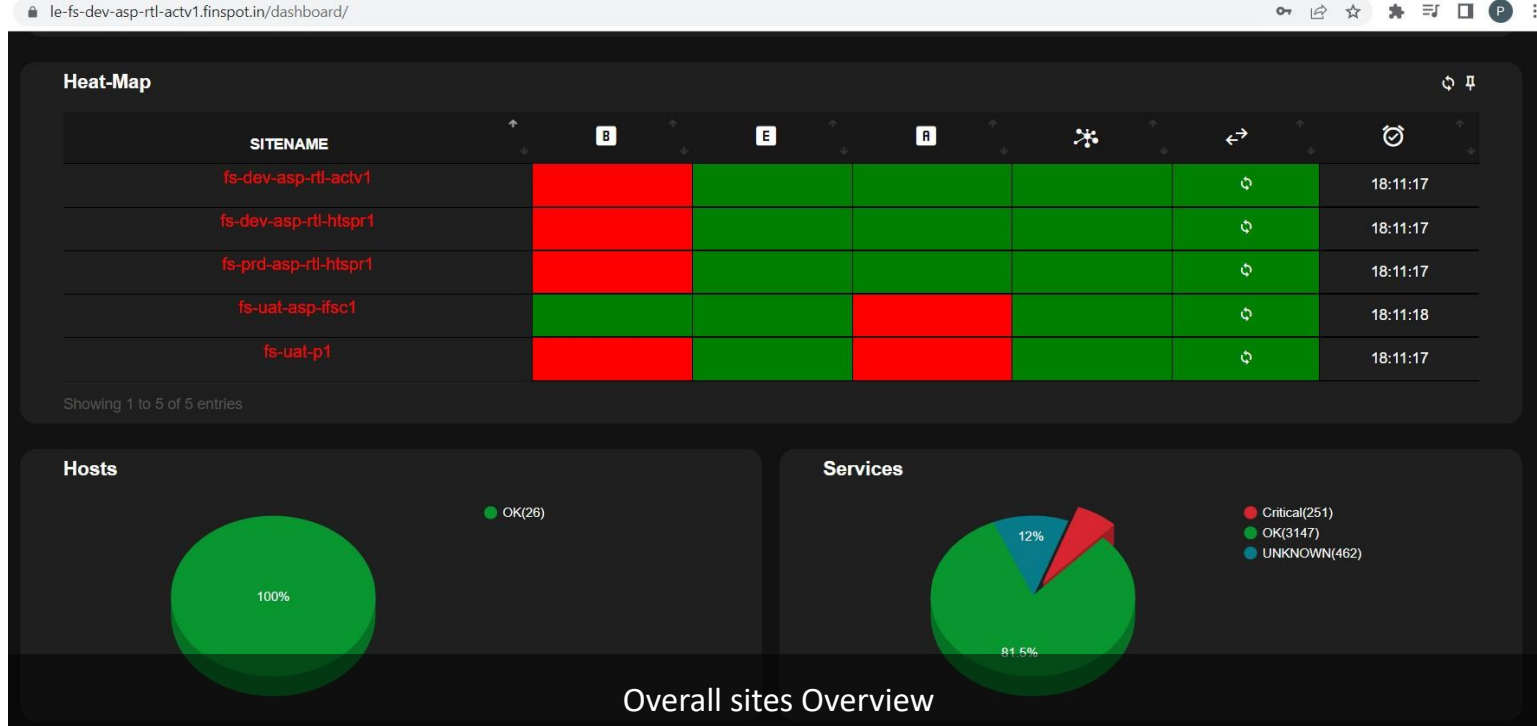

* Unique Features not available in other monitoring tools

Easy of Use

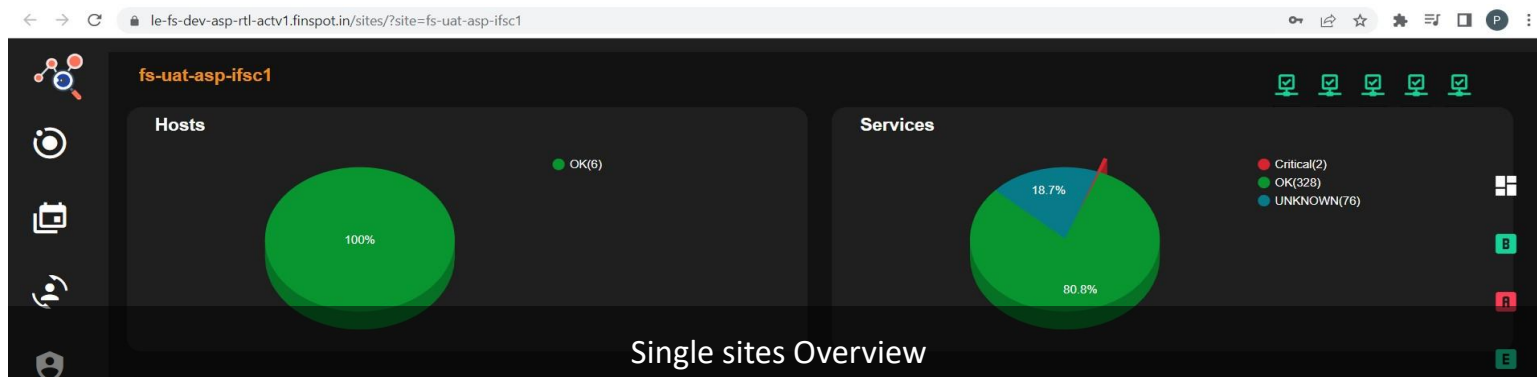

- Easy way to **drill down to the problem area**
- i.e., World->India->State->Site->Entity
- Even **layman can understand network/application-level problems** by viewing Entity Page
- **Dependency chain** of process. i.e., The impact of one important goes down
- **Catch the person who can solve** this immediately
- View the **Historical trend of the problem**

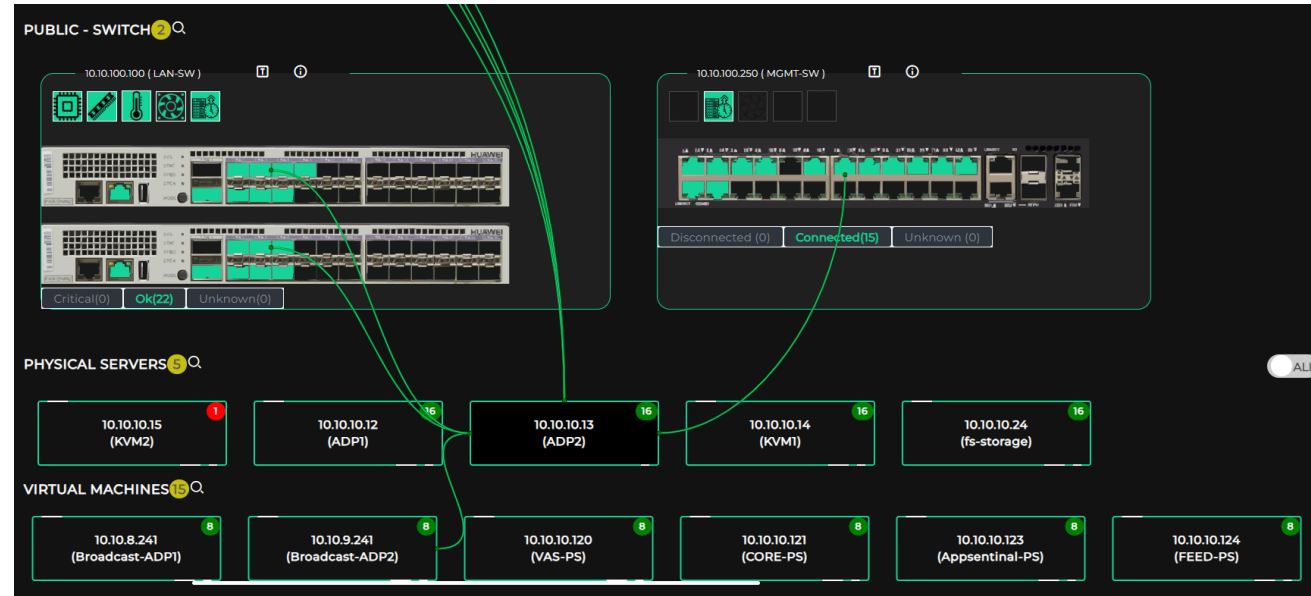

Overview Screens (Geographically drill down to Problem area)

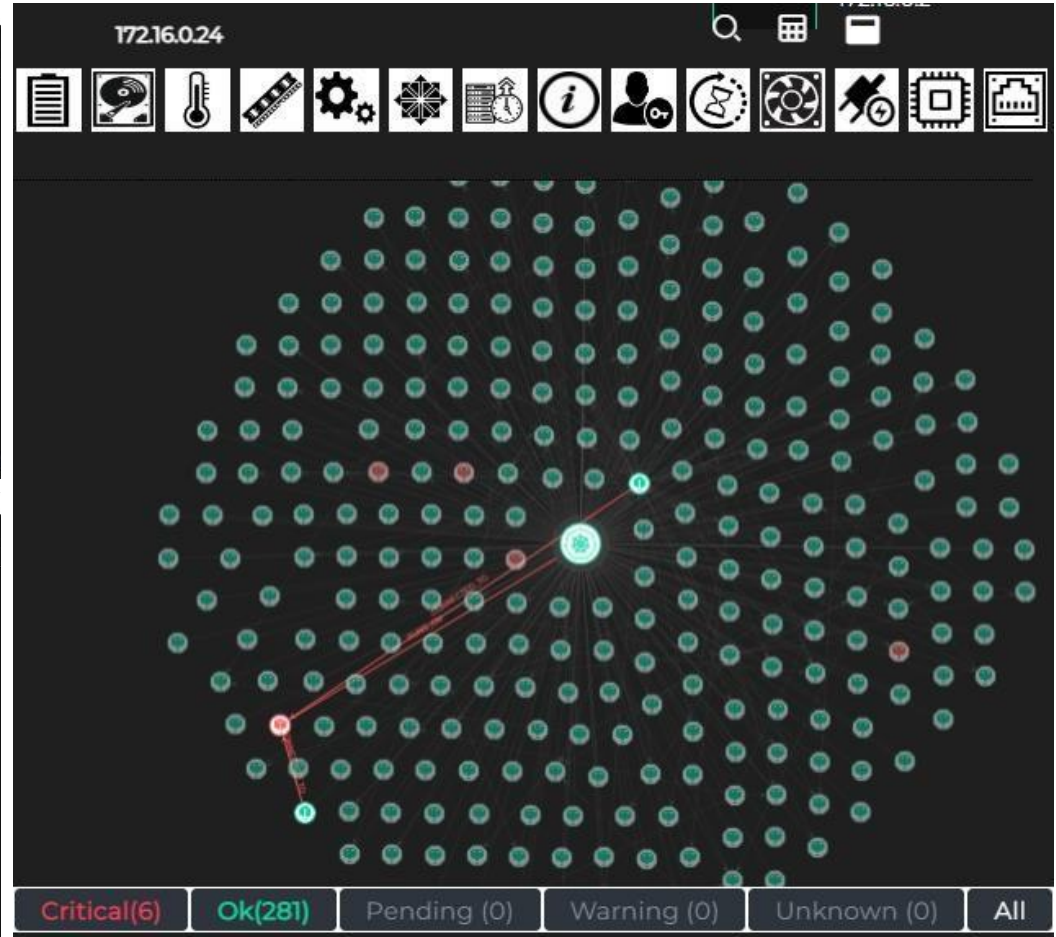

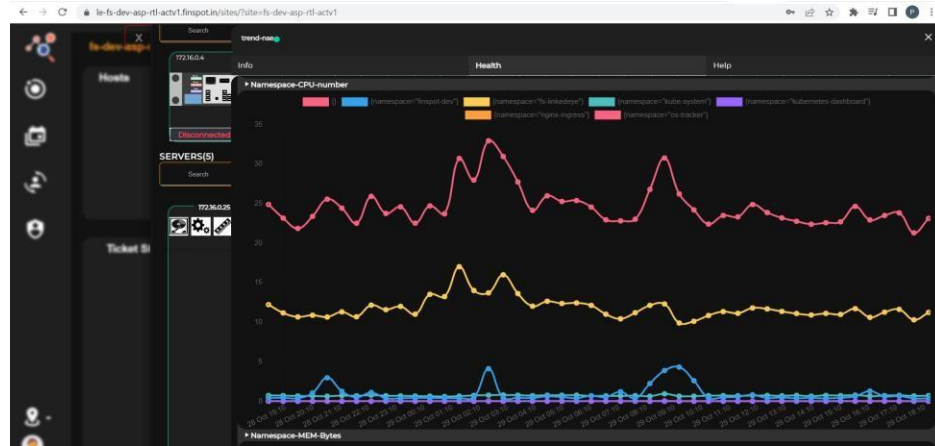

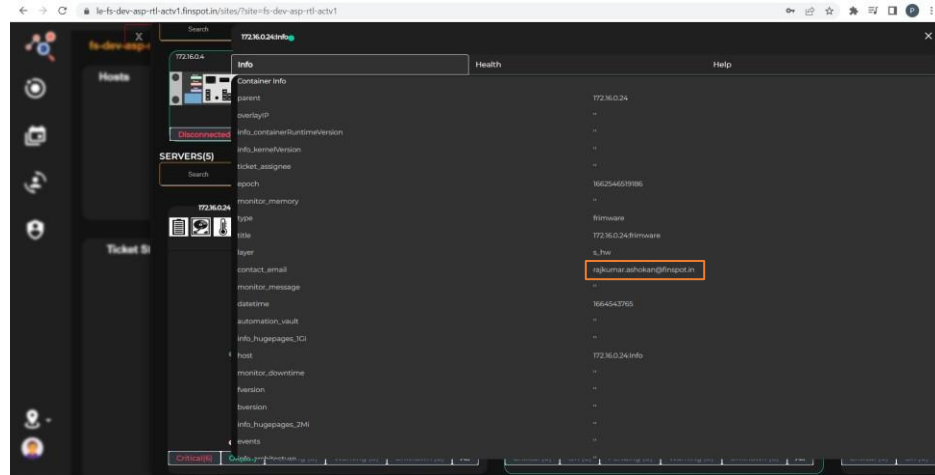

Overview of Sites

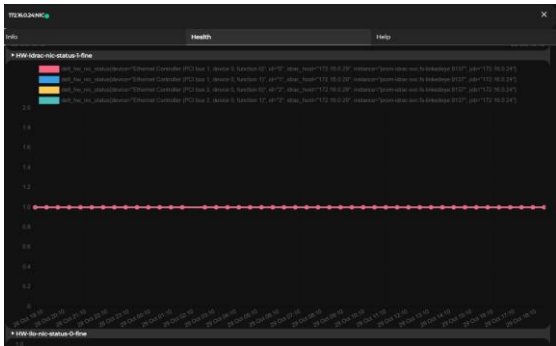

Entity View – Application Level

SSH Login

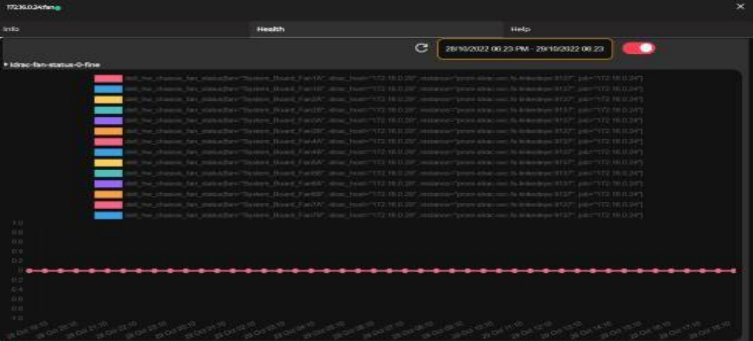

Switch Port traffic / Status

Hardware Status & Usage Monitoring

- Fan
- Disk
- Memory
- Battery
- NIC card
- Temperature
- CPU
- Power Supply
- User Login
- Uptime
- Load

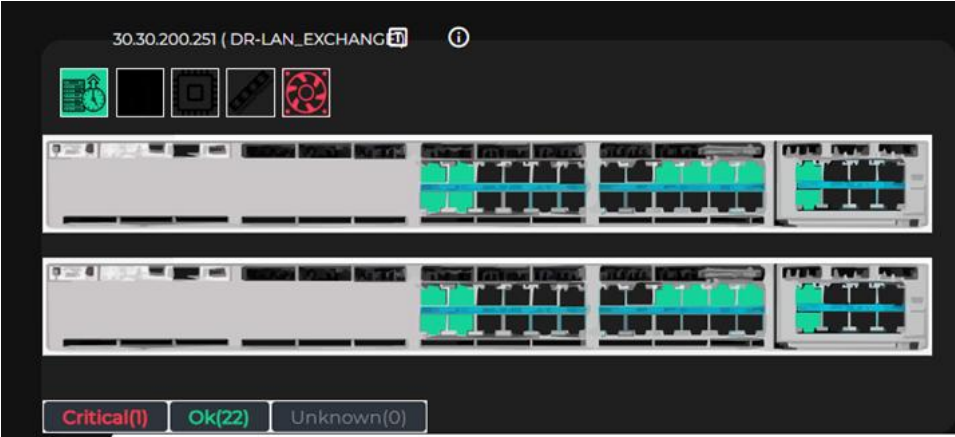

Server Fan status

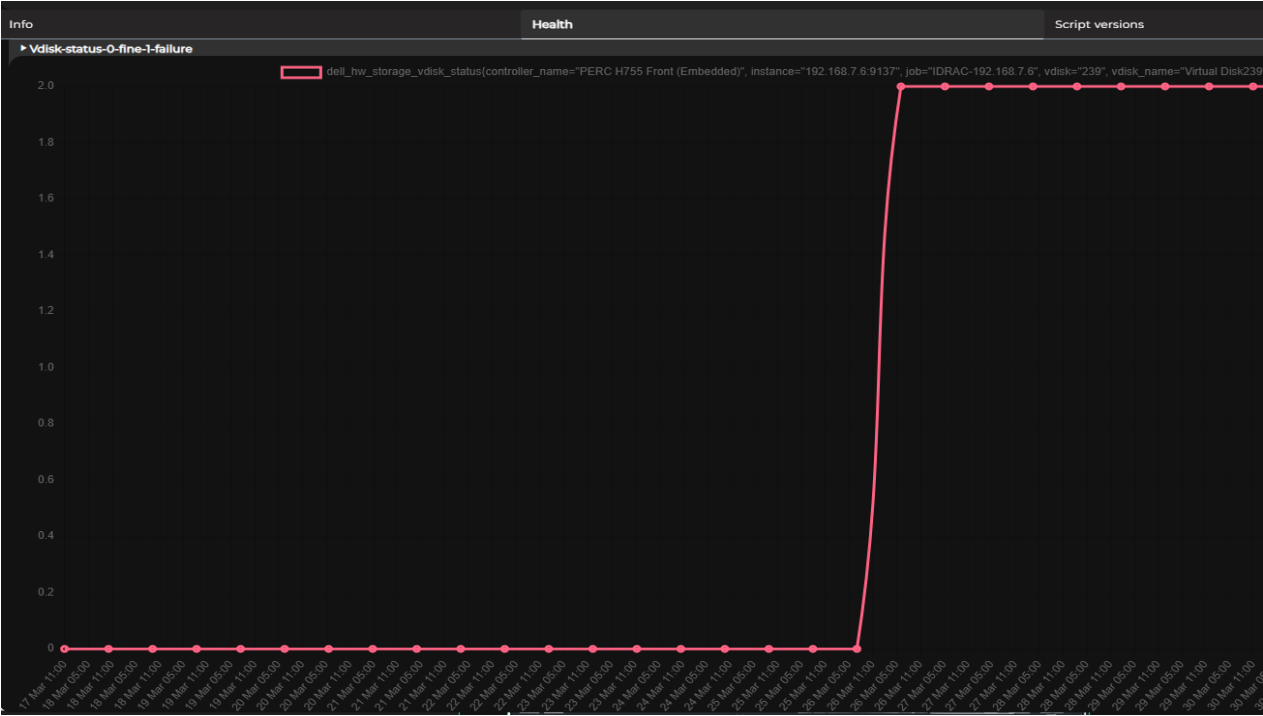

RAM Usage

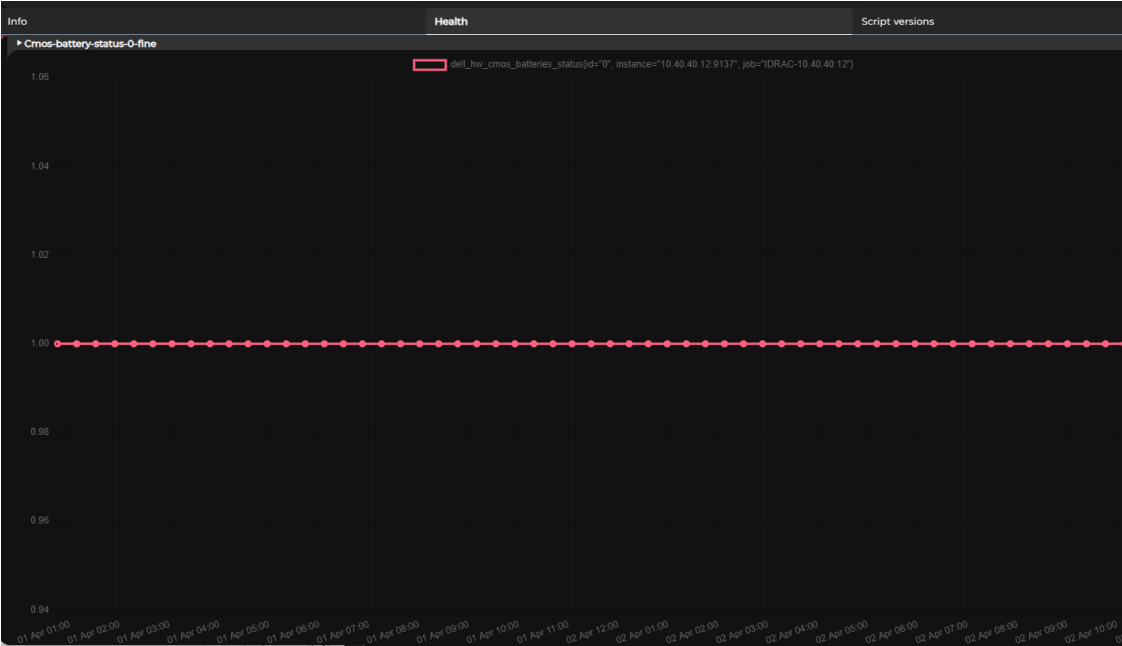

Use Case 1: FAN issue

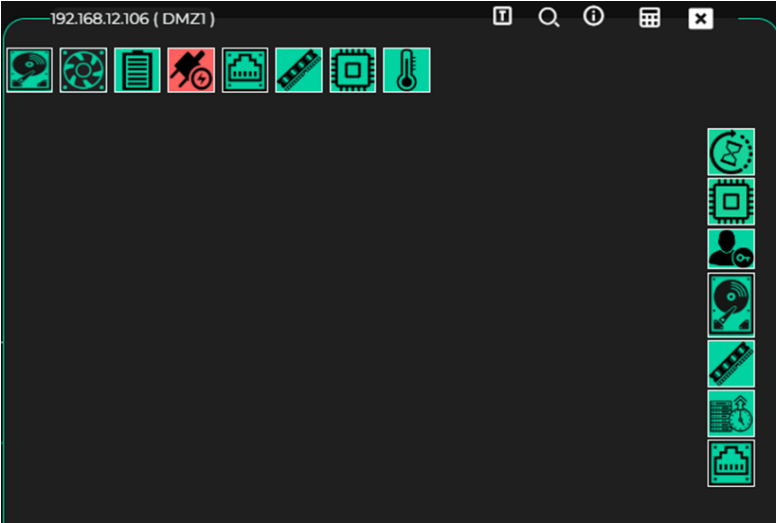

Use Case 2: HardDisk issue

Use Case3: Battery issue

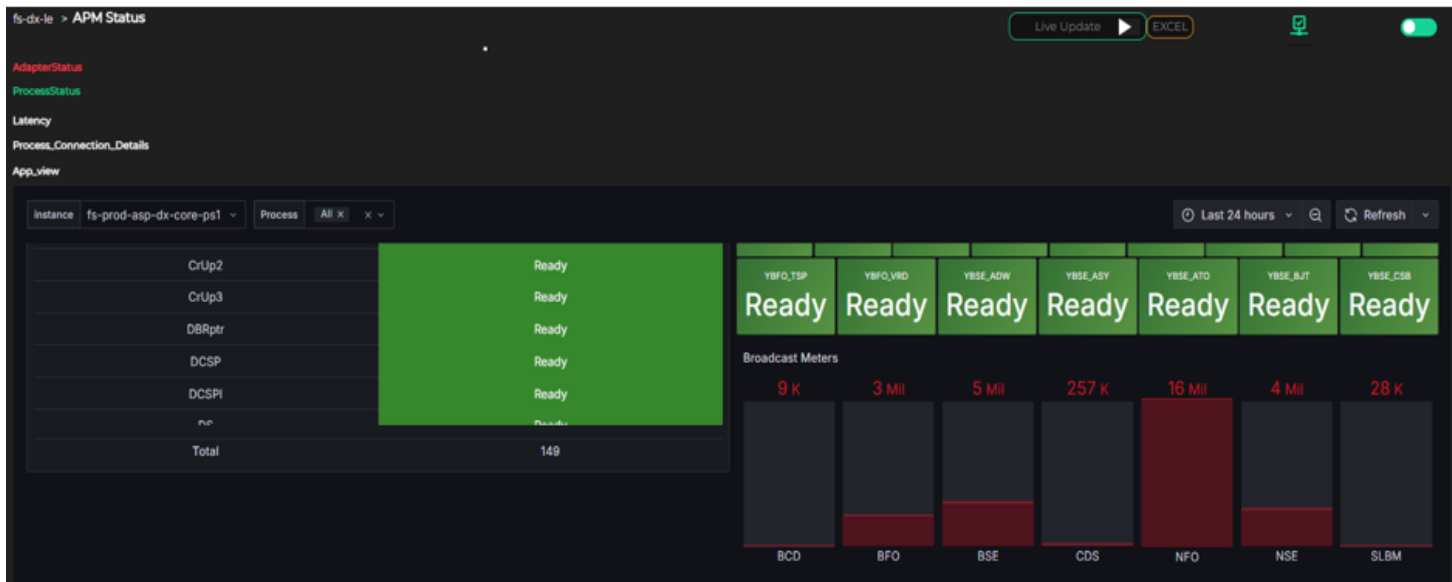

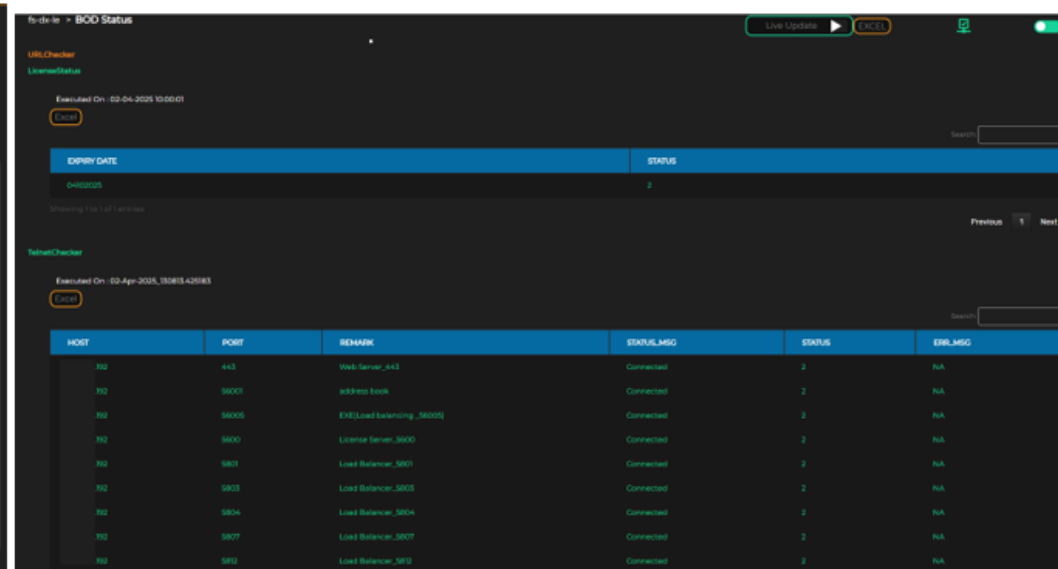

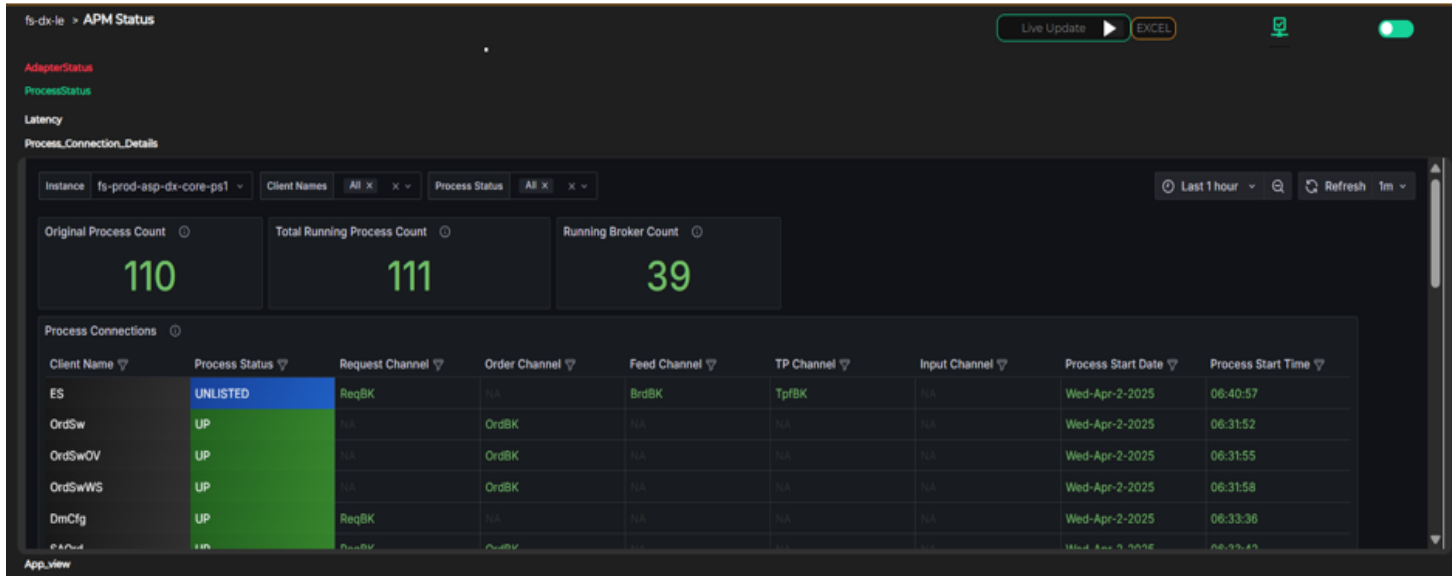

Use Case4: Power issue

Supervising Trade system

- **Maximum possible checks** before the market starts
- All **Download & upload exchange files verification**
- SSL expiry checks
- CTCL adapter status checks

Vault (Security POV)

- Is LE safe ? Because Automation agent need credentials of servers.
- Yes ! . All Sensitive information will be stored inside Vault & Masked reference will be used everywhere

Vulnerable free Application certified by Qualys

Summary of Monitored Parameters in LE

1. Physical Server Hardware Health through ILO
2. Physical Server Hardware Usage
3. VM Hardware Usage
4. Switches Health and Port usage
5. Firewall Health and Port usage
6. URL check
7. Telnet check
8. Order Latency
9. Message queue in the exchange adapters.
10. Data backup status (EOD)
11. Exchange adapter connectivity
12. Core server process status
13. Kambala OMS license status
14. Kambala Process connection status
15. Order execution
16. Client logins

END
